

HTML: Frames

- HTML frames divide the browser window into multiple sections where each section can load a separate HTML document.
- A collection of frames in the browser window is known as a frameset.
- The window is divided into frames in a similar way the tables are organized: into rows and columns.
- A <frame> tag is used with <frameset>

Attribute	Value	Description
cols	Pixels % *	It specifies the number and size of column spaces in the frameset.
rows	Pixels % *	It specifies the number and size of the rows spaces in the frameset.

COLS,ROWS

- a comma-separated list of pixel values, percentages values
- Frameset entries should always specify at least two rows or columns

```
<frameset rows="50,10%">

Using src attribute

Frame Source

..\Lab\practice\frame source.html

- used to display a nested webpage (a webpage within a webpage).
- The HTML <iframe> tag defines an inline frame, hence it is also called as an Inline frame or Floating frame
- It embeds another document within the current HTML document in the rectangular region.

`<iframe src="URL"></iframe>`

- ❖ Here, "src" attribute specifies the web address (URL) of the inline frame page.

Iframes – Height and Width

```
<html>
```

```

```

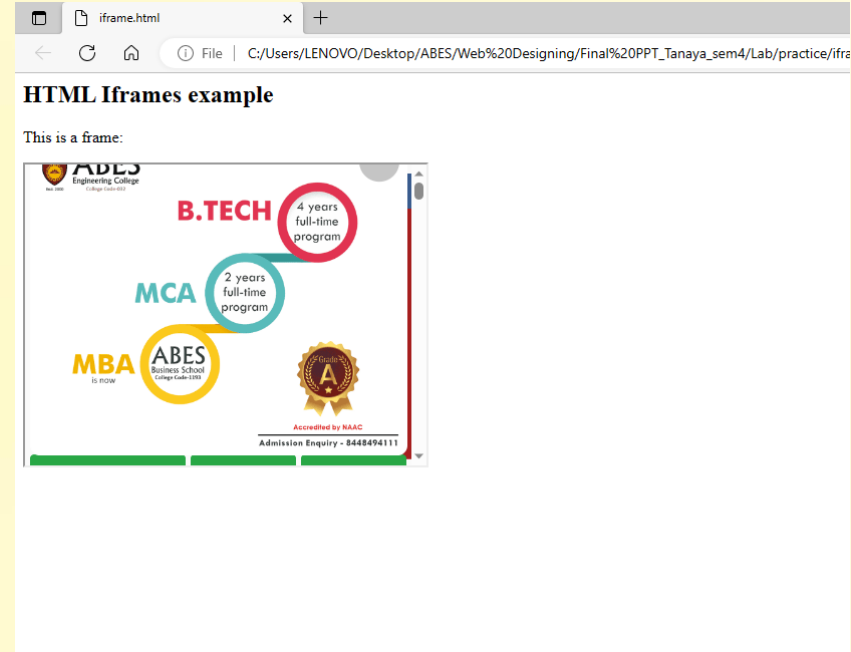

```
<p>This is a frame:</p>
```

```
<iframe src="https://www.abes.ac.in/"  
height="300" width="400"></iframe>
```

```
</body>
```

```
</html>
```

- You can set a target frame for a link by using iframe.
- Your specified target attribute of the link must refer to the name attribute of the iframe.
- The target attribute specifies where the linked page will be opened.
- The target="framename" value opens the linked page in the named frame.

Iframe Attributes

Attribute name	Value	Description
allowfullscreen		If true then that frame can be opened in full screen.
height	Pixels	It defines the height of the embedded iframe, and the default height is 150 px.
name	text	It gives the name to the iframe. The name attribute is important if you want to create a link in one frame.
frameborder	1 or 0	It defines whether iframe should have a border or not. (Not supported in HTML5).
Width	Pixels	It defines the width of embedded frame, and default width is 300 px.
src	URL	The src attribute is used to give the path name or file name which content to be loaded into iframe.
srcdoc		The srcdoc attribute is used to show the HTML content in the inline iframe. It overrides the src attribute (if a browser supports).
scrolling		It indicates that browser should provide a scroll bar for the iframe or not. (Not supported in HTML5)
	auto	Scrollbar only shows if the content of iframe is larger than its dimensions.
	yes	Always shows scroll bar for the iframe.
	no	Never shows scrollbar for the iframe.
